

README

agents/

The Helios agent layer - a deterministic FSM with model-driven nodes.

- Build it: `docs/architecture/AGENT_ARCHITECTURE.md` (milestones M7 / M9).
- Agents: Orchestrator, Monitor, Decompose, Diagnose, Critic, Prescribe, Narrator.
- Grounding: the LLM composes governed metrics and narrates deterministic stats; it never writes SQL or computes numbers.

Lean v1 = one grounded LLM brief. Empty until M7.
