

# MIGRATION\_REPORT

## Helios — Migration Report

Status: **COMPLETE**  · 2026-06-03 · **0 deletions** · executed per `REPO_RESTRUCTURE_PLAN.md` (approved).

### Summary

The repository was reorganized into a production-quality structure. All content was **moved or kept — nothing was deleted**. Generated intermediate artifacts were **archived** (moved to `docs/archive/`), not removed. Both flagged decisions were applied with the recommended resolutions.

### File accounting (no loss)

|                                                                                | Count                                                                                                             |

**Already correct before migration (no action):** CLAUDE.md (root); the 6 architecture docs in docs/architecture/ ; models/semantic/semantic\_layer.yml ; the 9 files in eval/scenarios/ .

## New artifacts created

- dbt/README.md , mcp/README.md , agents/README.md , backend/README.md , frontend/README.md , tests/README.md , scripts/README.md , notebooks/README.md — purpose-specific placeholders that double as .gitkeep .
- .gitignore — Python, dbt, secrets/credentials, eval outputs, OS/editor.
- eval/benchmark\_results/.gitkeep — keeps the empty output dir under version control.
- MIGRATION\_REPORT.md — this file.
- README.md gained a restructure banner pointing here for the authoritative layout.

## Verification

- ✓ All 13 spot-checked key paths resolve ( docs/architecture/DBT\_GUIDE.md , the planning/strategy moves, every archive subfolder, semantic\_layer.yml , superseded/semantic\_models.yml , README.md , CLAUDE.md ).
- ✓ docs/archive/ holds **62 files** (10+15+7+4+7+5+7+6+1) — every intermediate preserved.
- ✓ docs/ has **0 loose files**; models/semantic/ holds exactly **1** registry ( semantic\_layer.yml ).
- ✓ Final count **100 files / 27 dirs**, 0 deletions.

## Known follow-ups (cross-references the move made stale — recommend a reconciliation pass)

1. **CLAUDE.md paths are pre-restructure** — §2/§6/§8 still reference HELIOS\_PROJECT\_BIBLE.md at root, docs/DEPENDENCY\_MAP.md , and the old flat layout. The Bible is now docs/architecture/HELIOS\_PROJECT\_BIBLE.md ; DEPENDENCY\_MAP is docs/planning/DEPENDENCY\_MAP.md .
2. **Registry pointer is now broken** — CLAUDE.md §5 and MCP\_ARCHITECTURE.md §3 ( mcp\_servers.yml ) point at models/semantic/semantic\_models.yml , which is **now archived**. The canonical registry is models/semantic/semantic\_layer.yml (this drift predates the move; archiving the v1 file makes fixing it mandatory before M5/M6).
3. **Eval scenario count** — Bible §20 still says 34 scenarios; the benchmark has 50.
4. **README.md internal sections** (the ex- PROJECT\_STRUCTURE.md tree/paths) predate the restructure — a banner now flags this; a full refresh is optional.

These are documentation-consistency items, not migration failures. None block the structure; all are safe to fix in a single follow-up pass.
